

Bad Obstetric History (BOH)

- Habitual abortion affects 1-3 % of fertile couples !!
- Problem is compounded by the fact that there are multiple known elements regarding etiopathogenetic mechanism

Metropolis Offers Profiles that Includes Tests for All Known Causes of Habitual Abortion

Preg

Key Points:

- The first recommendation in evaluation of couples presenting with Habitual Abortion is to make a Karyotype Analysis of parents & aborted fetus
- Immunological causes should be considered in women with previous pregnancies complicated by unexplained fetal wastage.
- All antenatal cases with BOH should be routinely screened for TORCH

BOH Profiles @ Metropolis

BOH Profile – Maxi

ANA,
APA- IgG/IgM,
ACA IgG/IgM,
LAC,
TSH,
TORCH-13,
Karyotyping of couple

BOH Profile – Mini

ANA,
Cardiolipin antibody
IgG/IgM,
Lupus anticoagulant,
TSH,
TORCH-5 IgM
