

Hb Electrophoresis

HPLC (High-performance Liquid Chromatography)

One of the best methods for screening & detection of various hemoglobinopathies

A Rapid, Accurate & Reproducible tool for early detection and management of various Haemoglobin disorders

- Detection of Abnormal Hb, keeping in mind the high prevalence of Hb A2 in India, will help in prevention of more serious hemoglobinopathies including Beta Thalassemia major.

Indian Journal of Pathology and Microbiology – 53(1), January-March 2010

- Helps in quantification of Haemoglobins (Hbs) like HbA, HbA2 and HbF.

Indian J Pathol Microbiol. 2003 Jul;46(3):390-3.

Indications/Applications

Indications and applications of hemoglobin electrophoresis include the following:

- Evaluation of unexplained hemolytic anemia
- Microcytic anemia unrelated to iron deficiency, chronic disease, or lead toxicity
- A peripheral smear with abnormal red cell features (eg, target cells or sickle cells)
- Positive family history of hemoglobinopathy
- Positive neonatal screen results
- Positive results on sickle cell or solubility test
